

SAVE ENERGY

Making your home more energy efficient is a breeze if you take these simple steps:

STEP ONE – TAKE A HOME ENERGY AUDIT

Many utilities conduct free home energy audits, or you can hire a professional contractor to do it for you. You can even conduct your own audit. Use the ruler on the right to measure your attic insulation. If you have less than 12 inches, you should probably install more.

STEP TWO – MAKE ENERGY SAVING IMPROVEMENTS

By making a few inexpensive improvements, you can reduce your home energy bills and make your home more comfortable. Many improvements can be completed in less than a day and yield a lifetime of savings.
